## Voltage Output Signal Conditioners

### Description

Each DSCA49 voltage output module provides a single channel of analog output. The input signal is buffered, isolated, filtered and converted to a voltage output. Signal filtering is accomplished with a five-pole filter which provides 100dB per decade of attenuation above 1kHz. An anti-aliasing pole is located on the system side of the isolation barrier, and the other four poles are on the field side. After the initial system-side filtering, the input signal is chopped by a proprietary chopper circuit. Isolation is provided by transformer coupling, again using a proprietary technique to suppress transmission of common mode spikes or surges.

Special output circuits provide protection against accidental connection of power-line voltages up to 240VAC and against transient events as defined by ANSI/IEEE C37.90.1. Protection circuits are also present on the signal input and power input terminals to guard against transient events and power reversal. Signal and power lines are secured to the module using screw terminals which are in pluggable terminal blocks for ease of system assembly and reconfiguration.

The modules have excellent stability over time and do not require recalibration, however, zero and span settings are adjustable up to  $\pm 5\%$  to accommodate situations where fine-tuning is desired. The adjustments are made using potentiometers located under the front panel label and are non-interactive for ease of use.

### ► Features

- Accepts High-Level Voltage Input
- Provides High-Level Voltage Outputs to  $\pm 10V$  at 50mA
- ANSI/IEEE C37.90.1
- 1500Vrms Transformer Isolation
- $\pm 0.05\%$  Accuracy
- $\pm 0.02\%$  Linearity
- Output Protected to 240VAC Continuous
- True 3-Way Isolation
- Wide Range of Supply Voltage
- 110dB CMR
- Easily Mounts on Standard DIN Rail
- C-UL-US Listed
- CE and ATEX Compliant

**Installation Notes:**

- 1.) This Equipment is Suitable for Use in Class I, Division 2, Groups A, B, C, D, or Non-Hazardous Locations Only.
- 2.) Warning - Explosion Hazard - Substitution of Components May Impair Suitability for Class I, Division 2.
- 3.) Warning - Explosion Hazard - Do Not Disconnect Equipment Unless Power Has Been Switched Off or The Area Known to be Non-Hazardous.
