### Introduction

The IEX-402-VDSL2 is an industrial managed Ethernet extender for extending up to 3 km of LAN segments over twisted-pair copper wires at data rates of up to 100 Mbps using the VDSL2 standard. The Ethernet extender is designed with one 10/100BaseT(X) and one DSL port. It is the perfect solution to extend copper cable networks beyond conventional Ethernet limitations by using existing twisted-pair copper wires to reduce new network cable installation costs.

The IEX-402-VDSL2 series is designed for use in harsh operating environments. The DIN-rail mount, wide operating temperature range

(-40 to 75°C), and dual power inputs make it ideal for installation in industrial applications.

To simplify configuration, the IEX-402-VDSL2 uses CO/CPE automatic negotiation (factory default setting). The device will automatically assign CPE status to one of each pair of IEX devices. In addition, advanced management and monitoring functionalities through NMS, including a virtual panel, improve the user experience for quick troubleshooting.

### Features and Benefits
