Introduction

The MPC-122-K panel computer features a 2.26 GHz Intel Core 2 Duo processor with up to 4 GB of system memory to deliver a reliable, high performance computing platform for industrial marine systems. Two RS-232/422/485 optically-isolated serial ports and two gigabit Ethernet LAN ports provide reliable serial communications alongside high speed, redundant Ethernet LAN communications.

With its wide range of panel resolutions the MPC-122-K can be adjusted to satisfy the display requirements for many different marine applications, and also feature enhancements like wide viewing angles, full range dimming, and optional optical bonding. Designed as a modular unit, the MPC-122-K can be conveniently and quickly

integrated into either new or existing systems, helping reduce overall time-to-market and the associated deployment and integration costs.

MPC-122-K panel computers have proven resilience and reliability in marine environments by meeting or surpassing the strict industrial requirements defined in the IEC 60945, DNV, and IACS-E10 maritime standards, and their IP66 rated enclosures provide significant additional protection against the harsh effects of ocean elements.

Color-calibrated ECDIS models are also available upon request, providing an ideal HMI alternative for ECDIS charting and navigation stations.

We recommend taking the following precautions to minimize heat build-up within the display:

- Position the display within $\pm 40^\circ$ of the vertical.
- Install an external fan to increase airflow upwards through the display if (a) the display is not positioned within $\pm 40^\circ$ of the vertical, (b) the ambient temperature exceeds 25°C, or (c) the display is used in a location with minimal ventilation.

Important Safety Precaution:

Even though the display is rated to operate within the IEC 60945 standard of -15 to 55°C, it is best to ensure that the ambient temperature does not exceed 25°C. Doing so will increase the life of your display and minimize service costs.
