Overview

The NPort 6150/6250 series secure serial device servers provide reliable serial-to-Ethernet connectivity for a wide range of serial devices. The NPort 6150/6250 support TCP Server, TCP Client, UDP, and Pair-Connection operation modes to ensure the compatibility of network software. In addition, the NPort 6150/6250 also support Secure TCP Server, Secure TCP Client, Secure Pair-Connection, and Secure Real COM modes for security critical applications such as banking, telecom, access control, and remote site management.

Package Checklist

Before installing a NPort 6150/6250 secure device server, verify that the package contains the following items:

- 1 NPort 6150 or NPort 6250
- Power adapter (does not apply to -T models)
- 2 wallmount ears
- Documentation and software CD
- Quick installation guide (this guide)
- Warranty card

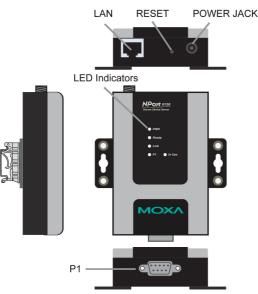

Optional Accessories

- DK-35A: DIN-rail mounting kit (35 mm)
- DIN-rail power supply
- CBL-RJ45M9-150: 8-pin RJ45 to male DB9 cable
- CBL-RJ45M25-150: 8-pin RJ45 to male DB25 cable

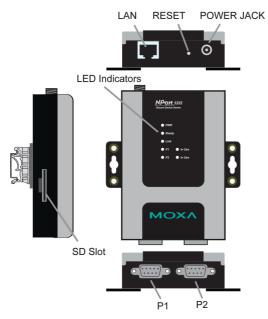

NOTE: Please notify your sales representative if any of the above items are missing or damaged.

Hardware Introduction

NPort 6150

NPort 6250

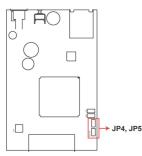

Reset Button—Press the Reset Button continuously for 5 sec to load factory defaults. Use a pointed object, such as a straightened paper clip or toothpick, to press the reset button. This will cause the Ready LED to blink on and off. The factory defaults will be loaded once the Ready LED stops blinking (after about 5 seconds). At this point, you should release the reset button.

LED Indicators

LED Name	LED Color	LED Functi	on
PWR	Red	Power is bei	ng supplied to the power input.
		Steady on	Power is on and the NPort is
			booting up.
		Blinking	Indicates an IP conflict, or, the
			DHCP or BOOTP server did not
			respond properly or a relay
	Red		output occurred. Check the relay
			output first. If after resolving the
			relay output the RDY LED is still
Ready			blinking, then there is an IP
			conflict, or the DHCP or BOOTP
			server did not respond properly.
		Steady on	Power is on and the NPort is
			functioning normally.
	Green	Blinking	The device server has been
			located by the Administrator's
			Location function.
	Off	Power is off	, or power error condition exists.

LED Name	LED Color	LED Function	
	Orange	10 Mbps Ethernet connection	
Link	Green	100 Mbps Ethernet connection	
	Off	Ethernet cable is disconnected, or has a short.	
	Orange	Serial port is receiving data.	
P1, P2	Green	Serial port is transmitting data.	
	Off	No data is being transmitted or received	
		through the serial port.	
	Green	Serial port was opened by server side	
P1, P2	Green	software.	
in-use LED	Off	Serial port has not been opened by server side	
		software.	

Adjustable pull high/low resistor for RS-422/485 (150 K Ω or 1 K Ω)

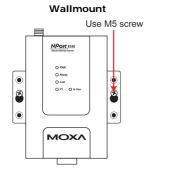

Jumpers are used to set the pull high/low resistors. The default is 150 k Ω . Short the jumpers to set this value to 1 k Ω . Do not use the 1 k Ω setting with RS-232 mode, since doing so will degrade the RS-232 signals and shorten the communication distance.

Hardware Installation Procedure

- **STEP 1:** Connect the 12-48 VDC power adaptor to the NPort 6150 and then plug the power adaptor into a DC outlet.
- **STEP 2:** For first-time configuration, use a cross-over Ethernet cable to connect the NPort 6150 directly to your computer's Ethernet cable. For connecting to a network, use a standard straight-through Ethernet cable to connect to a hub or switch.
- **STEP 3:** Connect the NPort 6150's serial port to a serial device.

Placement Options

The NPort 6150/6250 can be placed flat on a desktop or other horizontal surface. In addition, you may use the DIN-rail or wallmount options, as illustrated below.

Software Installation Information

The Documentation and software CD contains the user's manual, NPort Search Utility, and the PComm Lite Suite. Insert the CD into your computer's CD-ROM drive and follow the on-screen instructions. Please refer to the user's manual for additional details on using the NPort Search Utility and PComm Lite.

<u>RS-23</u>	2/422/4	85 Pin Assignme	ent (male DB	;9)
Pin	RS-232	RS-422 4-wire RS-485	2-wire RS-485	
1	DCD	TxD-(A)	-	
2	RXD	TxD+(B)	-	
3	TXD	RxD+(B)	Data+(B)	
4	DTR	RxD-(A)	Data-(A)	
5	GND	GND	GND	
6	DSR	-	-	
7	RTS	_	_	
8	CTS	_	_	
9	-	-	-	

Pin Assignments and Cable Wiring

0 0 0 6 7 8 9

Two serial cables for connecting the NPort 6150 to a serial device can be purchased separately. The wiring diagrams for the two cables are shown below.

Specifications

LAN	
Ethernet	NPort 6150/6250: 10/100 Mbps, RJ45
	NPort 6250-S-SC: Single-mode fiber
	NPort 6250-M-SC: Multi-mode fiber
Protection	Built-in 1.5 kV magnetic isolation
Serial	
No. of ports	NPort 6150: 1
	NPort 6250: 2
Interface	RS-232/422/485 (male DB9)
Serial Communication	n Parameters
Parity	None, Even, Odd, Space, Mark
Data bits	5, 6, 7, 8
Stop bit(s)	1, 1.5, 2
Flow control	RTS/CTS, XON/XOFF, DTR/DSR
Speed	50 bps to 921.6 kbps (supports nonstandard
	baudrates)
Console Port	RS-232 (please see the User's Manual for
	detailed operating instructions)
Memory	One SD socket
Software Features	
Protocols	ICMP, IPv4/v6, TCP, UDP, DHCP, BOOTP, Telnet,
	DNS, SNMP, HTTP, SMTP, HTTPS, SSL, SSH,
	PPPoE, RFC2217
Utilities	Device Search Utility for Windows
Security Protocols	SSLv3, TLSv1.0/1.1/1.2
